Education

University of Toronto

Sept 2021 – May 2026

Honors Bachelor of Science (HBSc) in Computer Science, Software Engineering

- **GPA:** 3.6/4.0
- **Coursework:** Software Engineering, Artificial Intelligence, Web Development, Operating Systems, Algorithm Design and Analysis, Computer Networks, Databases, Engineering Large Software Systems
- **Awards:** UofT Scholar Award (\$7,500), Dean's List 2021-2025

Skills

Programming Languages: Python, Javascript, Typescript, Java, SQL, C, C++, Haskell, GraphQL, Bash

Web Development: HTML, CSS, React, ExpressJS, NodeJS, NextJS, Angular, Vite, Tailwind, Figma

Databases & Cloud: MongoDB, Supabase, Prisma, AWS, Google Cloud Platform, Firebase

Tools: Docker, Postman, Linux, Jupyter Notebooks, Pandas, Jira, Microsoft Office (Excel, Powerpoint)

Soft Skills: Communication, Problem-Solving, Detail-Oriented, Collaboration, Initiative

Experience

Software Developer

Markham, ON

IBM Canada

May 2023 – August 2024

- Designed a centralized course tracking system using **GraphQL** and **webhooks**, automating **5+** departmental workflows and eliminating manual updates.
- Optimized RESTful APIs in **ExpressJS**, improving performance of a course translation pipeline for **100+** courses.
- Developed sentiment analysis pipelines with **Python** and IBM's **NLU API**, analyzing **100,000+** user reviews for actionable insights.
- Automated cross-application content migration by implementing data transformation pipelines that extract structured data and render it into **HTML**, eliminating manual workflows and saving **4+ hours** per course across teams.
- Authored comprehensive documentation for scripts and APIs, reducing onboarding time for future developers by **30%**.

Projects

Zoomer – Accessible AI Meeting Bot

January 2026

Hackathon Project | FastAPI, Python, NextJS, TypeScript, Recall.ai, Google Gemini

[Github](#) [Devpost](#)

- Built an AI meeting assistant that autonomously joins Zoom sessions via Recall.ai, ingests real-time transcripts through webhooks, and generates structured post-meeting artifacts for accessibility and review.
- Architected an event-driven FastAPI pipeline orchestrating transcript ingestion, topic tracking, multilingual translation, and LLM-based summarization with persistent artifact storage.
- Implemented a synchronized video-transcript interface in NextJS with timestamp-indexed playback and Q&A.
- Designed an accessibility-focused UI/UX prioritizing legibility and intuitive navigation across the meeting lifecycle.

UTScdle – University GeoGuessr Game

December 2024

Full Stack Web App | MongoDB, NextJS, TypeScript, Docker, Nginx, OAuth, GCP

[Github](#)

- Built a TypeScript-based NextJS web game where users guess campus locations from progressively de-pixelated images rendered via a custom canvas.
- Integrated the Google Maps Javascript API to plot guesses and calculate geospatial distance to target coordinates.
- Implemented OAuth 2.0 user authentication and session handling with access token verification, scoped permissions, and MongoDB session persistence.
- Designed a containerized deployment pipeline using Docker, Nginx as a reverse proxy, and GCP Cloud Storage for scalable image hosting.

Pactify – AI Contract Generator

August 2024

Full Stack Web App | MongoDB, ExpressJS, React, NodeJS, JavaScript, AWS

[Github](#)

- Engineered a full-stack MERN application allowing dynamic legal document generation with template-driven content injection using the OpenAI API.
- Implemented a rich-text editor with state-managed editing, versioning, and file export (PDF, DOCX).
- Developed secure RESTful APIs for user authentication and session management via JWT and bcrypt.
- Configured document storage and retrieval via AWS S3 and managed user data using MongoDB with Mongoose schema validation.
